DETAILED OFFICE ACTION

Faxing of Responses to Office Actions

In order to reduce pendency and avoid potential delays, TC 3700 is encouraging FAXing or responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers, which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into TC 3700 will be promptly forwarded to the examiner.

1. Claims 2, 5, 8-13, 17, 20, 25, 28 and 34-36 have been canceled. Claims 1, 3, 4, 6, 7, 14-16, 18, 19, 21-24, 26, 27 and 29-33 are pending.

Allowable Subject Matter

1. Claims 1, 3, 4, 6, 7, 14-16, 18, 19, 21-24, 26, 27, and 29-33 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: No prior art of record discloses or fairly suggest a carrier sheet comprising: a printed sheet having a

contour and printed matter on a front face, wherein the printed matter contains card information printed in an area having a contour smaller than the contour of the sheet; the paper sheet having other information outside the card area; a polyfilm patch adhered over the card area and over the card information printed; a thin flexible patch of magnet material adhesively secured on a rear face of the paper sheet and extending over the card area, wherein the patch has a bottom surface and a contour smaller than the contour of the paper sheet and larger than the card area; a die-cut in the paper sheet; a continuous, burstable holding means defined between the bottom of the die-cut and the bottom surface of the patch for holding the die-cut card area.

The Steidinger reference is the closest reference to read on applicant's invention.

However, Steidinger does not disclose a patch of magnet material having a bottom surface and a die-cut in the paper sheet delineating the contour of the card area, extending depth-wise through the polyfilm patch and paper sheet and partly into the patch of magnet material, wherein a continuous, burstable holding means is defined between the bottom of the die-cut and the bottom surface of the patch of magnet material.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cox et al, and Cox et al ('035) disclose similar carrier sheets having an integrated card.
